3 Ways To Make Your Business Grow

Invest In Advertising: Look at what's available and what makes sense for your niche. Need to go local? Newspapers combined with Facebook ads may make sense. Online advertising through Google and Facebook are a crucial way to reach customers, local, regional or global. It can take some experimenting to get it just right.

Invest In Training: As the world changes, so does business. Ensure your employees are at the top of their game when it comes to both industry standards and the way you do business. Keep them educated on best practices and make sure training is consistent across the board.

Invest In Your Team: Your employees make your business work. You want to

make sure they're operating at their best. Offer a healthy work environment that promotes their well-being. It can be as simple as offering great perks like flexible hours, remote work, professional development, catered lunches – the list goes on. Happy employees are the best employees. *Smallbiz Technology*, 2/12/2019

ARE YOU MAKING THESE MISTAKES WHEN TEXTING IN YOUR BUSINESS?

Do you text clients? Do you text clients after business hours? A recent report by Carphone Warehouse found that 73% of respondents had no problem texting with clients after business hours. However,

this can lead to serious issues, namely when it comes to drawing the line when communicating with clients (or employees).

It breaks the professional barrier. After-hours texting says you're available 24/7. It can intrude on your personal life, and when you don't text back, it can harm that professional relationship. If you must text, treat it like an email: stick to working hours and keep it business-focused.

Don't open doors to unprofessional behavior. Texting is a very casual form of communication, and it's easy to forget you're chatting with a client or employee. You must be careful about what you say, especially if you're in a management position. Keep it professional and courteous. *Small Business Trends*, 7/8/2019

USE THESE TOP TIPS TO FUEL YOUR PRODUCTIVITY

Stress can be a burden on your productivity, but there are ways you can use it to your advantage and turn it into something positive. Here are three tips to do just that:

Employees Keeping Your Data Safe? ... Don't Count On It

There are a lot of variables.

In any business, big or small, employees can be your biggest IT threat, and they might not even realize it. Businesses already face countless cyberthreats, like data breaches, cyber-attacks, online viruses and malicious e-mails. But despite all these outside threats, the real problem can come from the inside.

This monthly publication provided courtesy of Victor Magan, president of Network Brainiacs.

Our Mission:

We strive to provide reliable and respectful IT support. Our goal is to simplify and expand your business technologies so you gain a better understanding of your IT needs and become profitable using the proper technology for your business.

Your best defense, in this case, is training. Get all of your employees on the same page. Look at your current training and find the gaps, or start putting together training if you don't have it. You want a training program that covers all your bases and gives your employees the knowledge and tools they need to keep themselves and your business secure. (Don't know where to begin? Work with professional IT specialists. They know what your employees NEED to know!)

Another major security threat is phishing e-mails. On any given day, you and your employees can

Continued on page 2

be on the receiving end of dozens, if not hundreds, of fraudulent e-mails. Data from Symantec shows that 71% of targeted cyber-attacks stem from phishing e-mails. While awareness regarding phishing scams is better than ever, it's still far from perfect. And it doesn't help that phishing e-mails have gotten more advanced.

"71% of targeted cyber-attacks stem from phishing e-mails."

Phishing e-mails are typically disguised as messages from a legitimate source, such as a colleague, a bank or an online retailer. They try to trick recipients into clicking a link or opening a file (which you should NEVER do if you are not 100% sure about the source). But there are easy ways to identify scam e-mails:

1. They're impersonal. They may be addressed to "customer," "to whom it may concern" or "my friend." But be careful – sometimes they are addressed properly and use your name.

2. They're full of spelling and grammar errors. Not every phishing e-mail will have these errors, but it's good to read e-mails word for word

rather than just glancing over them. Unusual errors often mean a scam is lurking.

3. The "from" e-mail address is unfamiliar. This is one of the easiest ways to pinpoint a scam e-mail. Look at the sender, and if the address is filled with numbers, letters, misspelled words or is weirdly long, there's a good chance it's from a scammer.

The other major issue facing your business is your employees connecting to unsecured WiFi hot spots. It is such an easy mistake to make. Whether it's a remote employee or an employee working during lunch at a corner café, you never know when they might connect to unsecured WiFi (it doesn't help that it's everywhere these days). One Spiceworks study found that upward of 61% of employees connect to unsecured public WiFi while working remotely.

The problem is, you never know who is watching or if the public WiFi is really the network you intend to connect to. Hackers can easily set up a "fake" network to divert traffic to their hot spot to circulate malware and steal data.

Another WiFi threat might be right at home. If you have employees who work from home, you need to make sure their home WiFi connection is secure.

Too often, homeowners leave their WiFi wide-open because it's home. They think no one's going to sneak onto their WiFi or they keep it unsecure because it's easier to connect a lot of devices.

While it might be easier to connect to, it can cause huge problems. For one, WiFi signals can reach hundreds of feet. It's easy to sit outside of an apartment or out on the street and find dozens of WiFi signals. If any of these signals are unsecure, a hacker can sit outside undisturbed and go to work accessing data and planting malware.

It all comes back to this: Work with your employees to establish IT best practices. Educate them on threats and how to protect themselves and your company. Help them develop a positive IT security mindset at the office, at home or anywhere they work, whether they're using company equipment or their own.

Don't know where to start? Don't worry – one phone call and we can help get you started. Don't wait. Let's secure your business today.

Free Report Download: The Ultimate Guide To Choosing The Right VoIP Phone System

Read This Report To Discover:

- What VoIP is, how it works and why the phone company may force you to switch to a VoIP phone within the next 3-4 years.
- Four different ways to implement VoIP and why you should never use three of them for a business phone system.
- Hidden costs with certain VoIP systems that can negate any savings you might gain on your phone bill.
- Seven revealing questions to ask any VoIP salesperson to cut through the hype, half-truths and "little white lies" they'll tell you to make the sale.
